mixer Q8, then converted into the first IF. Its unwanted signal is attenuated by the crystal filter circuit. After amplified by IF amplifier Q25, the signal is led to IC2, Pin24.

2) Squelch Circuit

VHF:

The AF signal output from IC2 Pin12 is input to Pin19. Only the noise is amplified by the active filter in IC2, and output from Pin20, then amplified by the Noise amplifier Q27. The amplified noise is rectified to DC voltage by D20 and input to Pin21. The input voltage is determined by the analogue switch IC9 depending on the position of the Squelch VR.

In case that Squelch VR is set to MIN, all of the analogue switches in IC9 are turned ON, and the voltage of Pin21 decreases. Secondly the voltages are compared in IC2. The squelch signal (SDV) from Pin21 becomes "L" and the squelch opens.

In case that Squelch VR is set to MAX, all of the analogue switches in IC9 are turned OFF, and the voltage of Pin21 increases. Secondly the voltages are compared in IC2, the Squelch signal (SDV) from Pin21 becomes "H", and the squelch closes.

In case that Squelch VR is set to MIN, all of the analogue switches are turned ON, and the voltage of Pin15 decreases. Secondly the voltages are compared in IC2.

The Squelch signal (SDV) from Pin16 becomes "L" and the squelch opens. In case that Squelch VR is set to MAX, all of the analogue switches in IC9 are turned OFF, and the voltage of Pin15 increases. Secondly the voltage are compared in IC2, the Squelch signal (SDV) from Pin21 becomes "H", and the squelch closes.

3) Power Supply Circuit

VHF Power Supply Switch Circuit and Unlock Circuit

In the receiving mode, "H" is output from Pin4 of Shift Register IC8 according to the serial data from CPU, and Q30 and Q29 are turned ON, then 8V is added to 8RV line.

The crystal X1 of 12.8MHz is oscillated in IC751 (VHF), the output is led to Q22, and the output of Q22 is added to IC851 (UHF).

The reference oscillating frequency is divided in IC751 and IC851 to get the reference frequency of 5kHz or 6.25kHz.

The comparison frequency is divided by the PLL of pulse swallow system, IC751 and IC851 after the VCO output is amplified in Q703 (VHF) and Q803 (UHF). The reference frequency of 5, 10, 12.5, 15, 20, 25, 30, 50kHz steps can be obtained by dividing X1.
